Editorial	4
KULIKOWSKI R.: Optimum control of a decentralized development planning model Sterowanie optymalne zdecentralizowanym modelem planowania rozwoju Оптимальное управление моделью децентрализованного планирования развития	5
BURKOW V. N.: Problems of optimum distribution of resources Zagadnienia optymalnego rozdziału zasobów Задачи оптимального распределения ресурсов	27
MALANOWSKI K.: On application of a quadratic programming procedure to optimal control problems in systems described by parabolic equations Zastosowanie pewnej metody programowania kwadratowego do problemów sterowania optymalnego układów opisywanych równaniami parabolicznymi Применение одного метода квадратического программирования в задачах оптимального управления систем описываемых параболическими уравнениями	43
BUTKIEWICZ J., FIRKOWICZ S.: Multinomial distribution and its application to inspection of product quality Rozkład wielomianowy i jego zastosowanie w badaniach wyrobów Полиномиальное распределение и его применение в испытаниях изделий	57
PIASECKI S.: The optimization of regional service systems Optymalizacja struktury przestrzennej systemu obsługi Оптимизация районной системы обслуживания	65
SŁOMIŃSKI L.: Finding an optimum dynamic spatial structure of information systems O zadaniu optymalnego wyboru dynamicznej struktury przestrzennej systemów informacyjnych К вопросу поиска оптимальной динамической структуры информационных систем	73
KOŚCIELNY C.: An error-correcting-error-detecting procedure for arbitrary cyclic BCH codes Procedura korekcji i detekcji błędów dla dowolnych cyklicznych kodów BCH Процедура исправления и обнаружения ошибок для произвольных циклических кодов БЦХ	85

Editorial

In recent years an increasing scientific activity in the field of theoretical and applied cybernetics can be observed in Poland as well as in the other countries. Polish Academy of Sciences has come to a decision of publishing a new journal "Control and Cybernetics". The journal is to be edited by the Institute of Applied Cybernetics of Polish Academy of Sciences.

The main objective of the journal is to stimulate the development of cybernetical sciences by publishing the most interesting papers. Cybernetical sciences in the broadest sens refer to a collection of general concepts, principles, theories, tools, problems, methods and techniques associated with control and information in the various systems (e.g. physical, technical, biological, social). The results of the following areas of research will be published:

A. Theoretical areas of cybernetical research.

1. General control theory, in particular: models and identification of system parameters, systems analysis, optimization techniques and optimum systems, adaptive systems and stochastic problems in control systems, large scale systems, development systems.

2. Information theory.

3. Computer sciences.

4. Operational research.

5. Reliability.

6. Learning systems.

B. Applied areas of cybernetical research.

1. Application of system analysis approach to the ecological, economic, industrial and social systems.

2. Control and management of complex organizations.

3. Complex automation of large industrial systems.

4. Application of information theory and computer sciences to the problems of data transmission in technical, economic and management systems.

5. Modelling the biological and ecological systems, artificial organs and artificial intelligence.

6. Construction of technical systems based on the new physical, chemical and biological phenomena.

It is being hoped that "Control and Cybernetics" will also stimulate and encourage the interdisciplinary cooperation between the specialists in technical, social and biological sciences.
