Table of contents 1972–1991

Control and Cybernetics

VOL. 1 (1972) No. 1/2

KULIKOWSKI R. Optimum control of a decentralized development planning model

BURKOW V.N. Problems of optimum distribution of resources

MALANOWSKI K. On application of a quadratic programming procedure to optimal control problems in systems described by parabolic equations

BUTKIEWICZ J., FIRKOWICZ S. Multinomial distribution and its application to inspection of product quality

PIASECKI S. The optimization of regional service systems

SŁOMIŃSKI L. Finding an optimum dynamic spatial structure of information systems

KOŚCIELNY C. An error-correcting-error-detecting procedure for arbitrary cyclic BCH codes

Control and Cybernetics

VOL. 2 (1973) No. 1/2

PRZEWORSKA-ROLEWICZ D. Extension of operational calculus

KULIKOWSKI R. Modelling and optimum control of complex environment systems

KRUŚ L. Aggregation in dynamic PERT systems

OLBROT A.W. Algebraic criteria of controllability to zero function for linear constant time-lag systems

IANCHEVA M.I. Linguistic analysis and description of two-dimensional patterns

BARSKI M., JĘDRUCH W. Adaptive stochastic approximation and sample mean algorithms for tracking

KURCYUSZ S. A local maximum principle for operator constraints and its application to systems with time lags

NIEMINEN J. Determination of a generalized inverse of a Boolean relation matrix

Control and Cybernetics

VOL. 2 (1973) No. 3/4

BIONDI E. Optimum delivery problems

COZZI T. The rate of profits in a model of economic growth

GIANNESSI F. Functional aspects of dynamic programming. General results

KULIKOWSKI J.L. An application of a tense-logic system to formal planning

LEPSCHY A., MILO S., TORRIANO D. State variable approach to the study of hydraulic systems

LOMBARDINI S. Some suggestion for the theory of the capitalistic firm. A cybernetic approach

MARRO G. Controlled and conditional invariance in the synthesis of unknown-input observers and inverse systems

MARZOLLO A., PASCOLETTI A. On the reachability of a given set under disturbances

WIERZBICKI A. Methods of mathematical programming in Hilbert space

Control and Cybernetics

VOL.3 (1974) No. 1/2

SZEGÖ G.P. On diagonal models for bank assets management

GOŚCIŃSKI J. Combined technological and economic control process

BOBRZYŃSKI W., FILIPOWICZ B., GOŚCIŃSKI A., OBORSKI W., WALA K. Control of material flow in a metallurgical plant

IRACKI K. Solution of a three–dimensional bottleneck problem by means of Hurwicz's saddle-point conditions

MALANOWSKI K., WASILEWSKI A. An iterative method of optimization with applications to optimal control problems with state space constraints

FORTUNA Z. Superlinear convergence of conjugate gradient method

Control and Cybernetics

VOL.3 (1974) No. 3/4

BÖHM C., DEZANI–CIANCAGLINI M. Data structures and their transformations

DONTCHEV A.L. Sensitivity analysis of linear infinite–dimensional optimal control systems under changes

JAGIELSKI J., LEWANOWICZ S., MOZRZYMAS J Application of numerical methods for multipole description of the electrical field of the heart. The program POTENTIAL

KULIKOWSKI R. Planning and management of the health service by systems analysis methods

MACUKOW B. Analysis of the net composed of neuronlike elements and investigation of the edges influences

MÜLLER W. Approximation methods for optimal control problems

NIEMINEN J. On minimum point cutsets of a point weighted communication graph

TRIGGIANI R. Delayed control action controllable systems in Banach space

WIERZBICKI A.P., DONTCHEV A.L. Basic relations in performance sensitivity analysis of optimal control systems

Control and Cybernetics
VOL. 4 (1975) No. 1

KULIKOWSKI R. Decentralized management and optimization of development in large production organizations

SOKOŁOWSKI J. On parametric optimal control for a class of linear and quasilinear equations of parabolic type

TOŁWIŃSKI B. Application of the adaptive precision conjugated–gradient method to nonlinear planning models of national economy

Control and Cybernetics
VOL. 4 (1975) No. 2

KRUŚ L. Optimization of a completely decentralized production system

MALINOWSKI K., RUSZCZYŃSKI A. Application of interaction balance method to real process coordination

NAHORSKI Z. Digital stabilization of a linear stochastic system

KULIKOWSKI R. Modelling of production, utility structure, prices and technological change

OLBROT A.W. Observability tests for constant time–lag system

Control and Cybernetics
VOL. 4 (1975) No. 3/4

SIEMASZKO C. Maximum principle for differential open–loop games of pursuit in Banach spaces

MICHALEWSKI E. Some aspects of computer diagnostic analysis of the management systems

LASIECKA I. Conical approximations of sets in optimization theory

SOKOŁOWSKI J. On parametric optimal control for weak solution of abstract linear parabolic equations

ROLEWICZ S. On a norm scalarization in infinite dimensional Banach spaces

DONTCHEV A. Sensitivity analysis of optimal control systems with small time delay

MALANOWSKI K. On discrete approximation for a class of sets of admissible control

Control and Cybernetics
VOL. 5 (1976) No. 1

LEWANDOWSKA A. Controller synthesis for nonlinear plants with conditions on stability region

DOLECKI S. Contrôlabilité et observabilité des systèmes en série

LASIECKA I. Finite difference approximation of optimal control for systems described by nonlinear differential equation with delay

NIEMINEN J. A combination of Heiders' theory and cycle– and path–balance

Control and Cybernetics
VOL. 5 (1976) No. 2

KULIKOWSKI R. Toward a global model. A methodology for construction and linkage of long–range normative development models

DOLECKI S. A classification of controllability concepts for infinite–dimensional linear systems

LADZIŃSKI R. A note on the quadratic integral evaluations of transient motion

Control and Cybernetics
VOL. 5 (1976) No. 3

OLBROT A.W. Control of retarded systems with function space constraints. Part 1. Necessary optimality conditions

DONTCHEV A.L., PETRICZEK G., PŁONKA P., URBANIK A. Dynamic optimization and sensitivity analysis of multilevel control systems

KORYTOWSKI A. Optimal control for quadratic problem with neutral system equation

Control and Cybernetics
VOL. 5 (1976) No. 4

KULIKOWSKI R., KORCELLI P. On modelling and planning of optimum long–range regional development

RUSZCZYŃSKI A. Convergence conditions for the interaction balance algorithm based on approximate mathematical model

SOKOŁOWSKI J. External approximation of a parametric optimization problem for parabolic equations

KACPRZYK J., STAŃCZAK W. On an extension of the method of minimally interconnected subnetworks

Control and Cybernetics

VOL. 6 (1977) No. 1

CICHOCKI K. Optimum investment allocation in a model of economic growth

KULIKOWSKI R. Optimization of demographic policy in socioeconomic growth models

GUTENBAUM J., NICOLO F. Synthesis of linear multidimensional control providing maximal dumping of Lyapunov function of the system

LASIECKA I. Finite difference approximation of state and control constrained optimal control problem with delay

Control and Cybernetics

VOL. 6 (1977) No. 2

KULPA Z. Planar grammars, parallel picture processing algorithms and their equivalence

OLBROT A.W. Control of retarded systems with function space constraints. Part 2. Approximate controllability

Control and Cybernetics

VOL. 6 (1977) No. 3/4

CIECHANOWICZ W. Optimal investment strategy of resource–energy system. Part 1. The statement of the problem

SAWIK T. Stochastic optimal control of a multi–facility multi–product production scheduling with random times of supplies

KULIKOWSKI R. On optimization of demographic and migration policies in socio–economic growth model

LASIECKA I., MALANOWSKI K. On regularity of solutions to convex optimal control problems with control constraints for parabolic sytems

KONSTANTINOV M.M., PATARINSKI S.P., PETKOV P.HV., CHRISTOV N.D. Synthesis of suboptimal linear systems with output regulators

Control and Cybernetics

VOL. 7 (1978) No. 1

CIECHANOWICZ W. Optimal investment strategy of resource–energy system. Part 2. The solution of the problem

LASIECKA I., MALANOWSKI K. On discrete–time Ritz–Galerkin approximation of control constrained optimal control problems for parabolic systems

TOLWIŃSKI B. Numerical solution of N–person non–zero–sum differential games

KACPRZYK J. A branch–and–bound algorithm for the multistage control of a non-fuzzy system in a fuzzy environment

Control and Cybernetics

VOL. 7 (1978) No. 2

DOLECKI S. Semicontinuity in constrained optimization. Part I.1. Metric spaces

KACPRZYK J., STAŃCZAK W. On a further extension of the method of minimally interconnected subnetworks

NGUYÈN DINH QUYÊT On linear systems described by right invertible operators acting in a linear space

SOKOŁOWSKI J. Remarks on existence of solutions for parametric optimization problems for partial differential equations of parabolic type

Control and Cybernetics

VOL. 7 (1978) No. 3

KAŚKOSZ B. A sufficient condition for evasion in a nonlinear game. Part 1

DOLECKI S. Semicontinuity in constrained optimization. Part I.b. Norm of spaces

NGUYÈN DINH QUYÊT A minimizing problem of a quadratic functional for the systems described by right invertible operators in Hilbert space

GRZEGÓRSKI S.M. Method of functions basis embedding in optimization problem

GRZEGÓRSKI S.M. On a generalization of Morrison's method

TOLWIŃSKI B. On the existence of Nash equilibrium points for differential games with linear and non–linear dynamics

Control and Cybernetics

VOL. 7 (1978) No. 4

TRYBUS L. Nash feedback strategies for a two–person partial differential game with a Neumann–type parabolic

PAWŁOW I. On some properties of two–layer free parabolic boundary value problems
KAŚKOSZ B. A sufficient condition for evasion in a nonlinear game. Part II
DOLECKI S. Semicontinuity in constrained optimization. Part II

Control and Cybernetics

VOL. 8 (1979) No. 1

HAGER W.W. Convex control and dual approximations. Part I

NIEZGÓDKA M. On some properties of two-phase parabolic free boundary value control problems

PHAN QUOC KHANH A concept of optimality of degree p in the observation theory and optimal observability for convex functional

PAWŁOWSKI Z. Discriminatory prediction and its relation to optimum control of economic systems

Control and Cybernetics

VOL. 8 (1979) No. 2

HAGER W.W. Convex control and dual approximations. Part II

WALCZAK S. Euler–Lagrange's conditions for controls with bounded variation

PAWŁOW I. Finite-difference approximations to parabolic free boundary value problems arising in modelling of underground gas reservoir. Part I. Algorithms

HÄMÄLÄINEN R.P. Multilevel Stackelberg strategies with many players on each level

KURCYUSZ S., MAJCHRZAK J. Morrison-type algorithms for constrained optimization. Part I

Control and Cybernetics

VOL. 8 (1979) No. 3

PHAN QUOC KHANH On measurements in observations and optimal observations for linear lumped parameter systems

NIEMINEN J. Choice function and its representation

GUTENBAUM J. Control of multistage processes under maximization or balanced growth of utility function

BARTOSIEWICZ Z. Closedness of the attainable set of linear neutral control system

PAWŁOW I. Finite-difference approximations to parabolic free boundary value problems arising in modelling of underground gas reservoir. Part II. Convergence proof. Numerical results

NIEZGÓDKA M. Control of parabolic systems with free boundaries – applications of inverse formulation

KURCYUSZ S., MAJCHRZAK J. Morrison-type algorithms for constrained optimization. Part II

Control and Cybernetics
VOL. 8 (1979) No. 4

KOCIĘCKI M. Final observability of time-lag systems

HOLNICKI P. A linearly convergent approximation of quadratic cost control problems for hyperbolic systems

KRAWCZYK J.B. Theorem on the existence of a ρ–satisfying suboptimal control for linear–quadratic problems repetitively controlled

STRUPCZEWSKI W., KUNDZEWICZ Z. On a method of determination of parameters of conceptual models of open channel flow

Control and Cybernetics

VOL. 9 (1980) No. 1/2

KALMAN R.E. Pattern recognition properties of multilinear response functions. Part I

KALMAN R.E. Pattern recognition properties of multilinear response functions. Part II

FLÅM S.D. Existence of optimal decisions

SINGER I. Duality theorems for constrained convex optimization

NIEMINEN J. On minimaly interconnected subnetworks of a network

SOSNOWSKI A. Finite–dimensional approximation for stabilization of discrete time linear systems

NGUYEN THANH BANG Numerical method for solving nonlinear two–point boundary value problems in the theory of optimal control

NGUYEN THANH BANG Numerical solution of the c–observation problem for linear nonstationary systems

Control and Cybernetics

VOL. 9 (1980) No. 3

HOLNICKI P. Convergence of Galerkin type approximation to control constrained problems for hyperbolic systems

ŻOCHOWSKI A. A certain method of multivariable diagonal controller design

BUSŁOWICZ M. On the determination of a transfer function matrix from the given state equations for linear multivariable time–lags system

NGUYEN THANH BANG Numerical solution of the c–control problem for nonlinear systems

KURZYŃSKI M., ŻOŁNIEREK A. A recursive classifying decision rule for second–order Markov chains

Control and Cybernetics

VOL. 9 (1980) No. 4

LEUTOLA K., NIEMINEN J. Binary relations, flou relations and application

NGUYEN THANH BANG Numerical solution of the c–observation problem for nonlinear systems

RUSZCZYŃSKI A. Stochastic feasible direction methods for nonsmooth stochastic optimization problems

LIBURA M. Integer programming problems with inexact objective function

MALANOWSKI K. Convergence of approximations to quadratic optimal control problems with amplitude constrained control

LOMBARDINI S. Address to the round table session of the 5th Polish–Italian symposium on "Applications of systems theory to economics, management and technology"

Control and Cybernetics
VOL. **10** (1981) No. 1/2

NGUYEN KHOA SON Controllability of linear discrete-time systems with constrained controls in Banach spaces

KONSTANTINOV M.M., PETKOV P.H., CHRISTOV N.D. A Schur approach to pole assignment problem

SEIDMAN T.I. Convergent approximation methods for ill-posed problems. Part I. General Theory

SEIDMAN T.I. Convergent approximation methods for ill-posed problems. Part II. Applications

OWSIŃSKI J.W. Intuition vs. formalisation in clustering: local and global criteria of grouping

KACPRZYK J., STAŃCZAK W., Some contribution to the method of minimal sets for large graphs

WEINFELD R. On the alternative forms of functionals and their derivatives for a class of parameter estimation problems

Control and Cybernetics
VOL. **10** (1981) No. 3/4

CAPUZZO DOLCETTA I., MATZEU M. A constructive approach to the deterministic stopping time problem

TADUMADZE T. Existence theorems for solutions of optimal problems with variable delays

MYSZEWSKI J.M. A general algorithm of exact model matching by proportional output feedback

ŻOCHOWSKI A. Some properties of multivariable control systems with diagonal controller

GRYGIEL G. Algebraic $\sum_k$ assignment problems

STACHOWIAK T., STAŃCZAK W. Partitioning a set of entities due to their mutual dissimilarities

RUBINSTEIN L. On mathematical modelling a solid-liquid zone in a two-phase monocomponent system and in binary alloy

KALISZEWSKI I. Constraint modification methods for linear programming problems

MIZUKAMI K., KRAWCZAK M. On heuristic strategies for some interception problem

SUFLETA Z. Some conditions for identifiability of spatially-varying parameters in a class of distributed systems

Control and Cybernetics
VOL. **11** (1982) No. 1/2

VISINTIN A. A phase transition problem with delay-

DONTCHEV A.L., VELIOV V.M. A singularly perturbed optimal control problem with fixed final state and constrained control

KAŚKOSZ B. Necessary conditions for a minmax control problem

SOKOŁOWSKI J., MATSUMURA T., SAKAWA Y. Numerical solution of a nonlinear two–point boundary–value problem by an optimization technique

CHMIELARZ W., CICHOCKI K., STACHURSKI A. Experiments with the penalty scalarizing function for nonlinear multiobjective optimization problem

Control and Cybernetics
VOL. **11** (1982) No. 3/4

OHNO K., ZDRZAŁKA S. Modified policy iteration algorithms for discounted Markov games

NGUYEN THANH BANG A combination of Picard's method and time–decomposition technique for the stiff nonlinear two–point boundary value problems

STUDNIARSKI M. Necessary optimality conditions for a nonsmooth discrete control problem

MYŚLIŃSKI A. A nonsmooth optimal design problem of bending thin plates

STACHOWIAK T., STAŃCZAK W. A backward iteration technique for partitioning a set of entities due to their mutual dissimilarities

Control and Cybernetics
VOL. **12** (1983) No. 1/2

RUBINSTEIN L. On mathematical modelling of growth of an individual monocomponent crystal from melt in non–uniform temperature field

JANECKI D., GOSIEWSKI A. Model matching adaptive controllers for minimumphase discrete–time plants

KALISZEWSKI I. Enumeration of efficient solutions for bicriteria integer programs by number theoretic approach

KIWIEL K.C. A phase I – phase II method for inequality constrained minimax problems

Control and Cybernetics
VOL. **12** (1983) No. 3/4

FALCONE M., MATZEU M. Optimal stopping for a Cauchy problem without uniqueness

HACKBUSCH W., WILL T. A numerical method for a parabolic bang-bang problem

BATSUREN S. On the continuity of the implicit mapping

KACZOREK T. Minimum energy control of 3–D linear systems

BEDNARCZUK E. Duality and stability theorems for convex multivalued constrained minimization problems

SZKATUŁA K., LIBURA M. Probabilistic analysis of simple algorithms for binary knapsack problem

Control and Cybernetics
VOL. **13** (1984) No. 1/2

PETKOV P.HR., CHRISTOV N.D., KONSTANTINOV M.M. A stable computational algorithm for synthesis of state observers

PEDEMONTE O. On perturbations of quadratic functionals with constraints

CHANDRASEKHARAN P.C., SAMBANDAN A. Eigenstructure assignment of multivariable systems with fast, medium and slow modes

ANDREUCCI D., ZHENGZHONG D. Existence of the solution for the oxygen diffusion consumption problem in a cylindrical domain

RUSZCZYŃSKI A. A recursive quadratic programming algorithm for constrained stochastic programming problems

BYRSKI W., FUKSA S. Optimal finite parameter observer. An application to synthesis of stabilizing feedback for a linear system

TARCZYŃSKI A. Zero placement for discrete time systems using nonstationary extrapolators

STAŃCZAK W. An efficient algorithm for partitioning a network into minimally interconnected subnetworks

Control and Cybernetics
VOL. **13** (1984) No. 3

NEGOITA C.V. Structure and logic in optimization

DUBOIS D., PRADE H. Fuzzy–set–theoretic differences and inclusions and their use in the analysis of fuzzy equations

SLYADZ N., BORISOV A. Decision–making based on fuzzy stochastic dominance

KACPRZYK J., YAGER R.R. Linguistic quantifiers and belief qualification in fuzzy multicriteria and multistage decision making

ORLOVSKI S.A. Multiobjective programming problems with fuzzy parameters

TANAKA H., ICHIHASHI H., ASAI K. A formulation of fuzzy linear programming problem based on comparison of fuzzy numbers

CHANAS S., KULEJ M. A fuzzy linear programming problem with equality constraints

LEUNG Y. Compromise programming under fuzziness

SAKAWA M. Interactive fuzzy goal programming for multiobjective nonlinear problems and its application to water quality management

VERDEGAY J.L. Applications of fuzzy optimization in operational research

TOGAI M., WANG P.P. Analysis of a fuzzy dynamic system and synthesis of its optimal controller

KISZKA J.B., GUPTA M.M., NIKIFORUK P.N. The influence of some fuzzy implication operations on the steady–state and dynamical properties of a fuzzy logic controller

FENG DE–YI, LOU SHI–BO, CHEN HUA–CHENG, GU JIN–PING, LIN MING–ZHOU Applications of fuzzy mathematics in seismological and meteorological research

Control and Cybernetics

VOL. 13 (1984) No. 4

RUBINSTEIN L. A model problem of the theory of non electrolyte transfer through deformable semipermeable membranes

PHAN QUOC KHANH A formula for extremum involving Φ–convexity

NOWAKOWSKI A. Sufficient conditions for a minimum in a classical optimal control problem

PETKOVSKI D.B. Robust stability of decentralized ε–coupled control systems

MYSZEWSKI J.M. Addmissible systems for the exact model matching

NIEDERLIŃSKI A., MOŚCIŃSKI J., ARNOLD K., KASPRZYK J., WARCZYKOWSKI P. Self–tuning temperature control of an industrial PVC batch reactor

MIZUKAMI K., SIKORSKI J. Three algorithms for calculating surrogate constraints in integer programming problems

PHAM TRONG QUAT A subgradient method with space dilation for minimizing convex functions

Control and Cybernetics

VOL. **14** (1985) No. 1/3

BERMUDEZ A., SAGUEZ C. Optimal control of variational inequalities

KULAGINA N.A., MEIRMANOV A.M. Boundary control of the medium motion in problems of crystallization and melting

HOFFMAN K.H., SPREKELS J. On the identification of heat conductivity and latent heat in a one–phase Stefan problem
