
CONTENTS

Preface	823
Table of contents	827
Shape Optimization Problems	829
PH. GUILLAUME and M. MASMOUDI Sensitivity computation and automatic differentiation	831
J.R. ROCHE and J. SOKOŁOWSKI Numerical methods for shape identification problems	867
M. LAUMEN and E.W. SACHS Concepts of Newton and quasi-Newton methods for optimal shape design problems	895
A. HABBAL Some basics in optimal control of domains	917
Sensitivity Analysis and Applications	935
B. ROUSSELET Introduction to shape sensitivity: three-dimensional and surface systems	937
K. DEMS Shape and material parameters sensitivity analysis in quasi-harmonic problems	969
A. HENROT How to prove symmetry in Shape Optimization Problems?	1001

A.M. KHLUDNEV	1015
On equilibrium problem for a plate having a crack under the creep condition	
Structural Optimization and Scientific Computing	1031
C. CINQUINI & M. LOMBARDI	1033
Anti-optimization technique to include uncertainties in structural optimization problems	
A. GARSTECKI and A. GLEMA	1051
Pontriagin method versus nonlinear programming in applications to structural optimization	
C. KANE and M. SCHOENAUER	1059
Topological optimum design using genetic algorithms	
J.M.M. ANDERSON, B.A. MAIR and M. RAO	1089
Positron emission tomography: A review	
J. BROWN, P.C. HANSEN, J. WAŚNIEWSKI, Z. ZLATEV	1113
Performance of air pollution models on massively parallel computers	

Shape Optimization Problems
