

## CONTENTS

---

<i>Contents</i>	155
I. CHRYSOVERGHI, J. COLETOS and B. KOKKINIS: Discrete relaxed method for semilinear parabolic optimal control problems	157
M. HEINKENSCHLOSS, F. TRÖLTZSCH: Analysis of the Lagrange–SQP–Newton method for the control of a phase field equation	177
B. AGHEZZAF: Second-order necessary conditions of the Kuhn-Tucker type in multiobjective programming problems	213
R. CORREA: Dynamic consistency under private information	225
<i>Special Section: Algorithms for Modelling and Control</i>	233
EDITORIAL OFFICE: A note on the origins of this Special Section	235
E. RYDYGIER, Z. TRZASKA: Inverse problems for distributed parameter systems solved with combinatorial method	237
T. ABBASOV, S. HERDEM, M. KÖKSAL: Modelling of distributed parameter nonlinear systems by differential Taylor method	259
E. KRASON:	269

linear system with disturbances

- M. BUSŁOWICZ: 281  
Frequency responses of linear interval plants with delay
- Z. KOWALCZUK and P. SUCHOMSKI: 291  
Control of delay plants via continuous-time GPC principle
- S. ŚWITALSKI: 315  
Control system with the specific performance index for an evaporator
- L. KAWECKI, T. NIEWIEROWICZ: 331  
Time and electric energy losses minimization in speed control of induction motors
- M. KUBALE, K. MANUSZEWSKI: 355  
The smallest hard-to-color graphs for the classical, total and strong colorings of vertices

*Book reviews*

- A. Nowakowski: 367  
A. MELIKYAN: "Generalized Characteristics of First Order PDEs Applications in Optimal Control & Differential Games"
- M. Bergounioux: 371  
W. DESCH, F. KAPPEL, K. KUNISCH (eds.): "Control and Estimation of Distributed Parameter Systems"
- M. Piasecki: 375  
M.G. NADKARNI: "Basic Ergodic Theory"
